

# Virtua Heart Failure

Managing heart failure takes a team approach. Our advanced practice nurse practitioners and nurses work closely with your cardiologist and primary care provider to help you live a full life.

If you were admitted to the hospital with heart failure, we aim to see you at one of our locations within one week of discharge to ensure that there are no problems with your medications and that the diuretic dose you were sent home on is working well.

## **During your outpatient visit, we will:**

- Assess your fluid levels and adjust your medications to ensure you are on the right doses
- Administer intravenous diuretics in the office, when needed, to help keep you out of the hospital
- Teach you about appropriate diet and lifestyle changes that will help you successfully live with heart failure

**Your first appointment at one of our heart failure centers will be made before you leave the hospital.**
